In Their Own Words Gene Constant 2021-11-22 Preface While in the 3rd grade, I found myself to having taken an interest in reading. In fact, I had demonstrated an exceptional interest and comprehension while reading most of the books available to me at school. An opportunity presented itself in the form of a competition. My third grade teacher posted a form bearing all the student's names prominently affixed on a classroom wall. A stack of books suitable for third graders were available for taking home. A gold star was placed to the right of a student's name, whenever we submitted a one page summary of that book. That summary would demonstrate whether the student could comprehend the content of the book. I applied myself and earned a lot of stars. Much more stars than any other student. In the third grade, I could provide answers to math problems without having to write anything on a piece of paper, other than the answer. When teachers in the 3rd & 4th grades spoke aloud, saying something like: "what is the answer for 5 + 3 -2 divided by 1.5 x 6?" In many stances, I would raise my hand soon after a teacher had finished speaking. My answers were correct. When we moved to Springfield, mother enrolled us all in Catholic school. All my siblings had books. She did not buy me any books. I failed the 5th grade, for lacking any study materials. I had to retake the 5th grade in a public school. After graduating the 8th grade, my mother hospitalized me and approved the removal of all my upper teeth. I was told that my teeth had a thin white line on my teeth near the gum. I was also told that the bottom teeth should be removed the following year. A few months after surgery, I started my freshman year at Springfield High School, without my upper teeth nor an upper denture. After two days of classes, I was too embarrassed to continue. I joined the US Navy at 17 1/2 years old as a high school dropout. (odd to be saying dropping out of something you never started). During boot camp, we had to take tests. My scores were high enough to be assigned to radioman school. After finishing my tour in the service, I returned home & discovered my mother had fled the state after stealing \$7,000 from my checking account. I once again entered the civilian job market. I no marketable skill nor education beyond the 8th grade. I had no money. I had no place to live. I had no immediate means to support myself. I had no clothes. I am not saying that mom was cold, but I bet that if someone placed butter into her mouth, that it would not melt. So, what became of me you may ask. I hope you will read this book and find a bit (or two) of inspiration. My lifelong friend Linda recently recalled to me an idiom of human behavior that I had shared with her years ago. She has also found this to be true: "People Never Change". My favorite environmental phrases are: "Take nothing but pictures. Leave nothing but footprints". Eastman Kodak "Every successful something started from nothing" author unknown *Hard Math for Elementary School* Glenn Ellison 2013-05-29 Hard math for elementary school is a math enrichment textbook, providing ideas to provide children with lessons that are harder, deeper, and more fun. It has chapters to supplement most textbook topics as well as chapters on topics, such as making polyhedra out of marshmallows and toothpicks, that make the book more fun and develop higher reasoning skills.

Building Thinking Classrooms in Mathematics, Grades K-12 Peter Liljedahl 2020-09-28 A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling "non-thinking" student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. Building Thinking Classrooms in Mathematics, Grades K-12 helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers' most frequently asked questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.

Helping Children Learn Mathematics National Research Council 2002-07-31 Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre-kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

Eighth-Grade Math Minutes Doug Stoffel 2007-08 Take just one minute a day to quickly assess student progress in basic math skills. This book features 100 quick reproducible drill sheets to help students increase speed in math operations and strengthen problem-solving skills. The 10 problems on each sheet can be done in one or two minutes and are a great warm-up to the daily math lesson. The quick, one-minute format combined with instant feedback makes this a challenging and motivational assignment students will look forward to each day. Students become active learners as they discover mathematical relationships and apply acquired understanding to complex situations and to the solution of realistic problems in each minute. An answer key is included. Note that this book is produced in the United States and may contain some US-based standards.

Word Problems Stephen K. Reed 1998-12-01 Research by cognitive psychologists and mathematics educators has often been compartmentalized by departmental boundaries. Word Problems integrates this research to show its relevance to the debate on the reform of mathematics education. Beginning with the different knowledge structures that represent rule learning and conceptual learning, the discussion proceeds to the application of these ideas to solving word problems. This is followed by chapters on elementary, multistep, and algebra problems, which examine similarities and differences in the cognitive skills required by students as the problems become more complex. The next section, on abstracting, adapting, and representing solutions, illustrates different ways in which solutions can be transferred to related problems. The last section focuses on topics emphasized in the NCTM Standards and concludes with a chapter that evaluates some of the programs on curriculum reform.
